x1500 chrI:60001-65000 387 molecules

ERV46

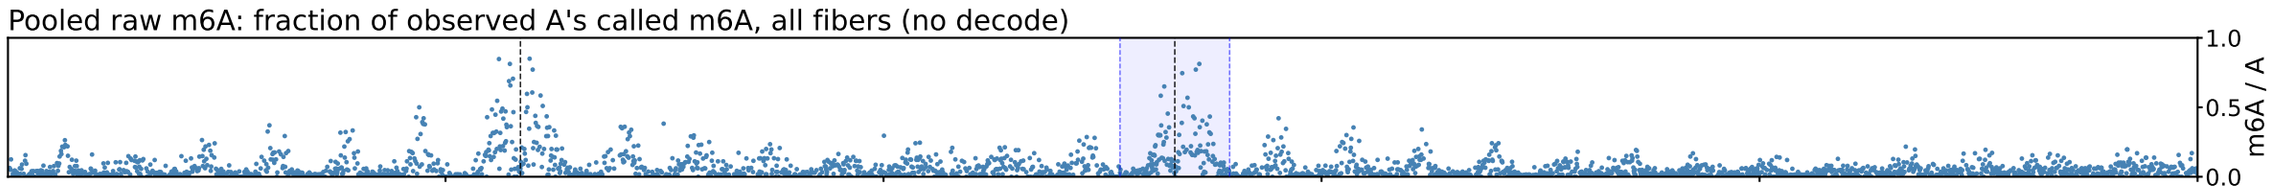

CDC24

PTA1

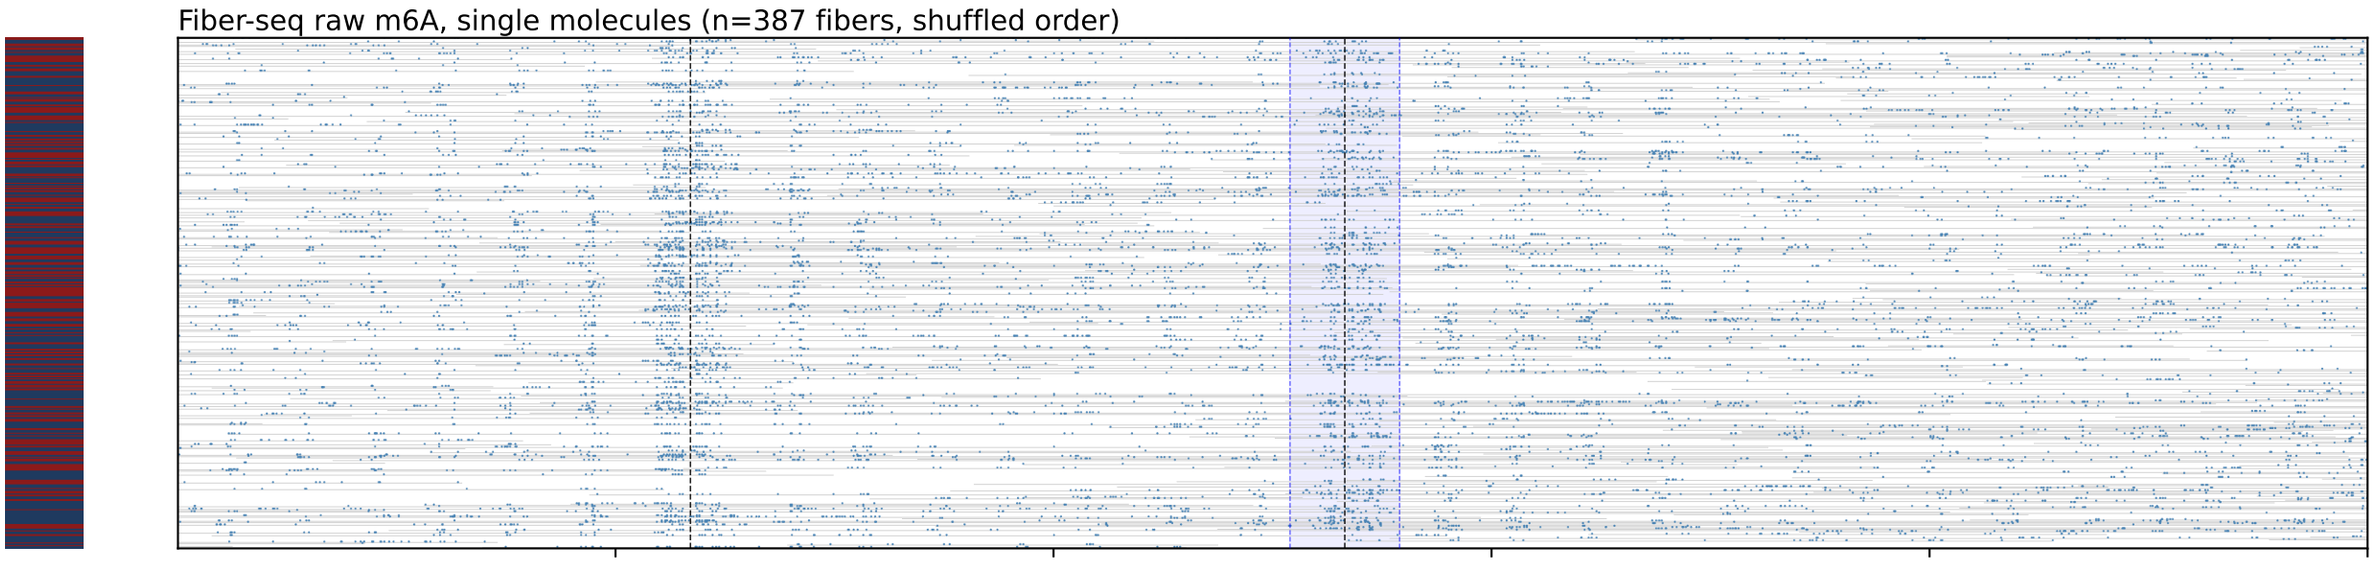

Mean P(accessible) over the 387 fibers (per-read decode; no pooled-pileup decode for this model)

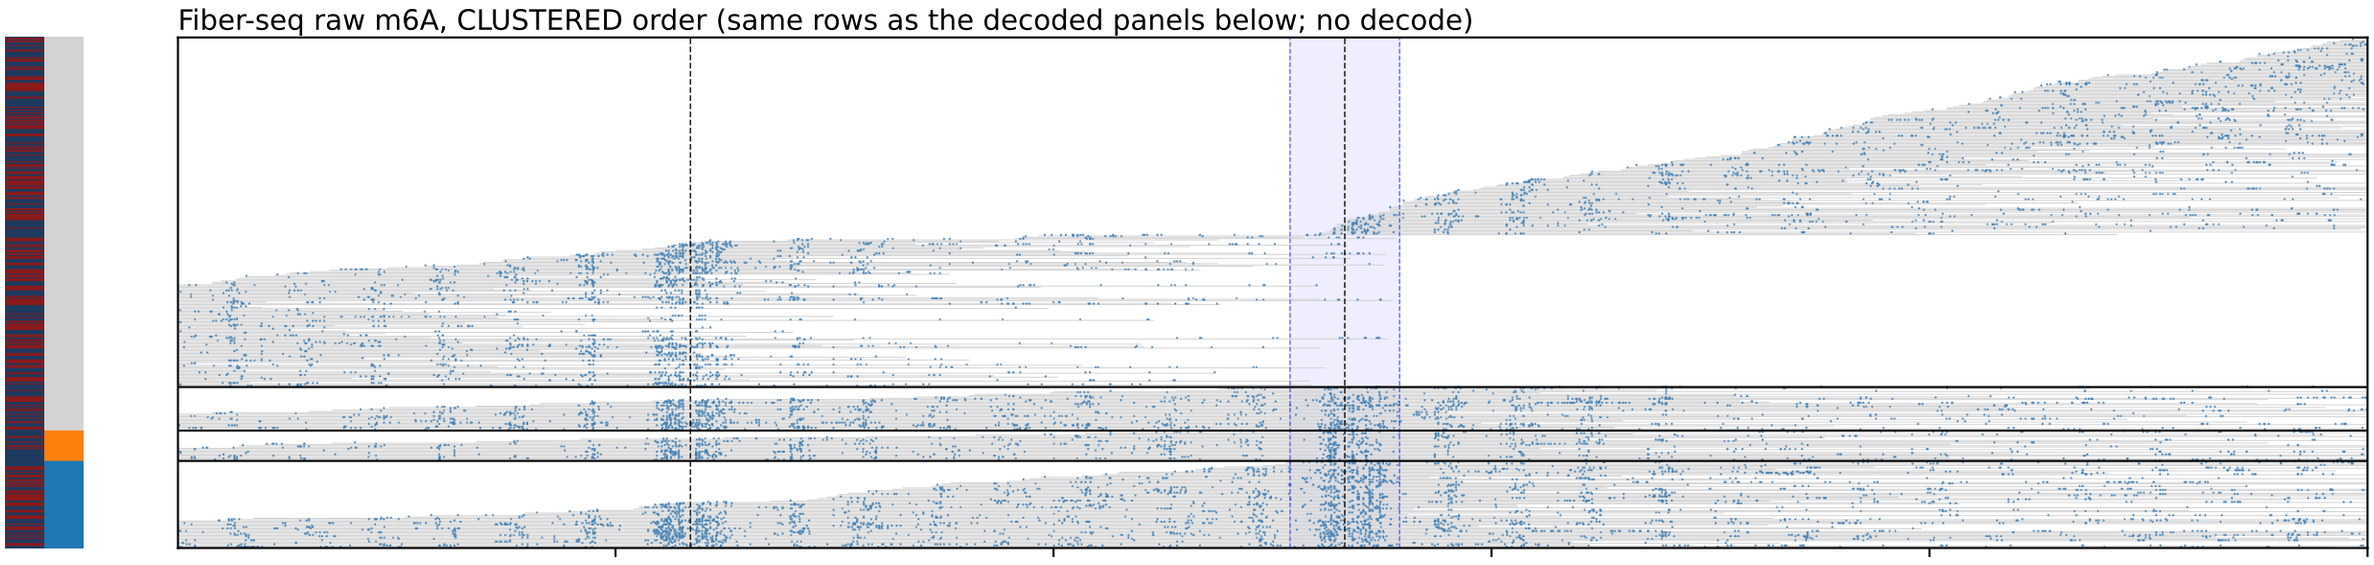

Pooled raw m6A: fraction of observed A's called m6A, all fibers (no decode)

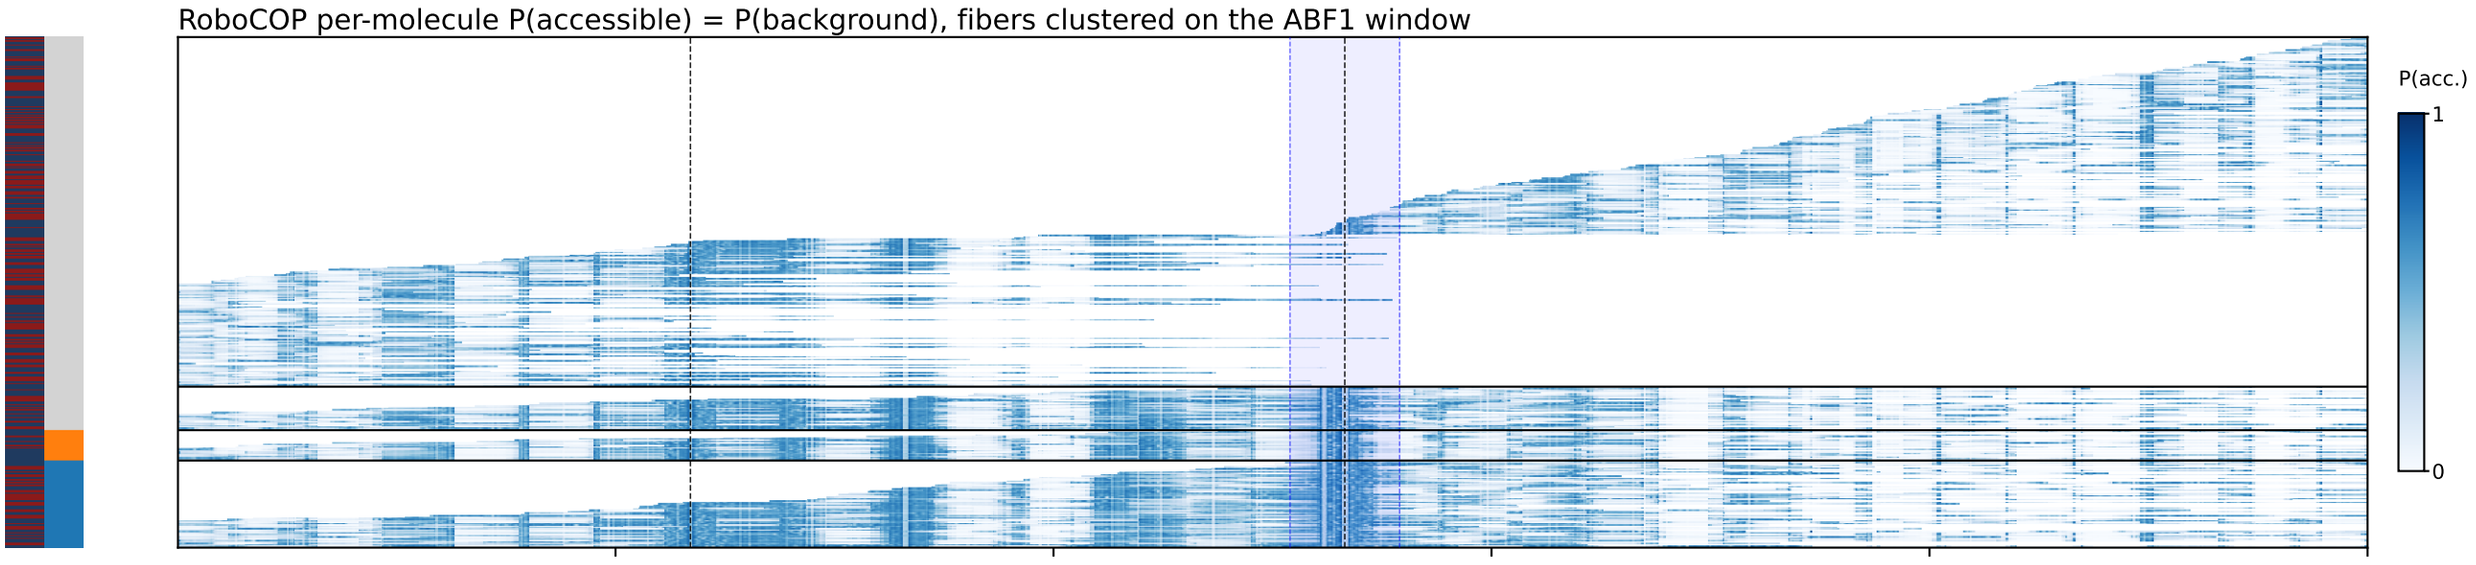

Fiber-seq raw m6A, single molecules (n=387 fibers, shuffled order)

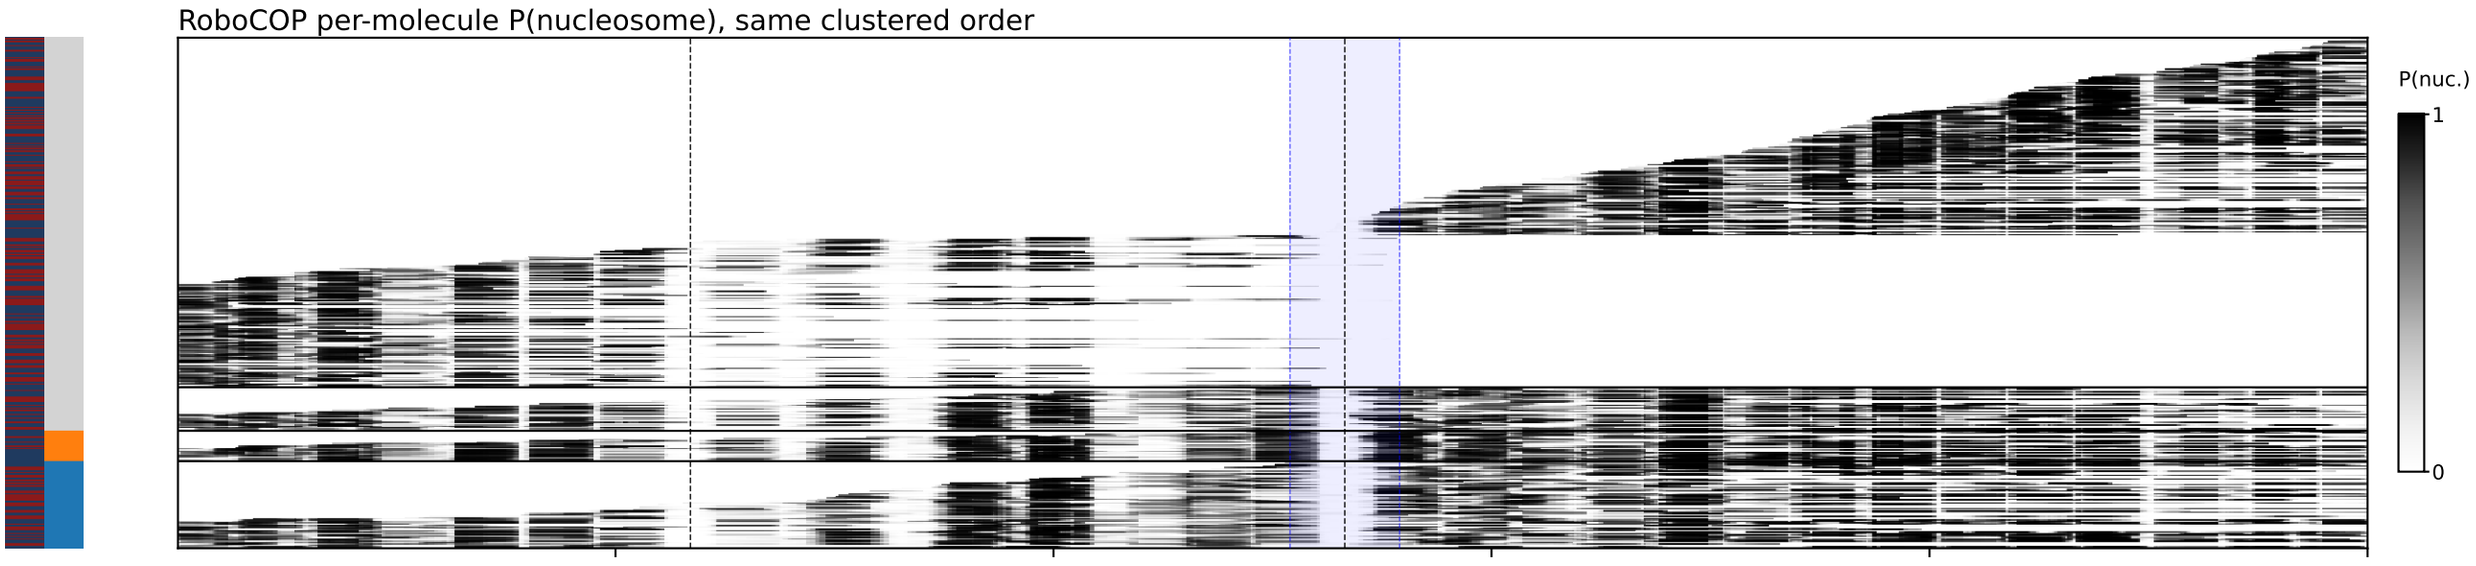

Fiber-seq raw m6A, CLUSTERED order (same rows as the decoded panels below; no decode)

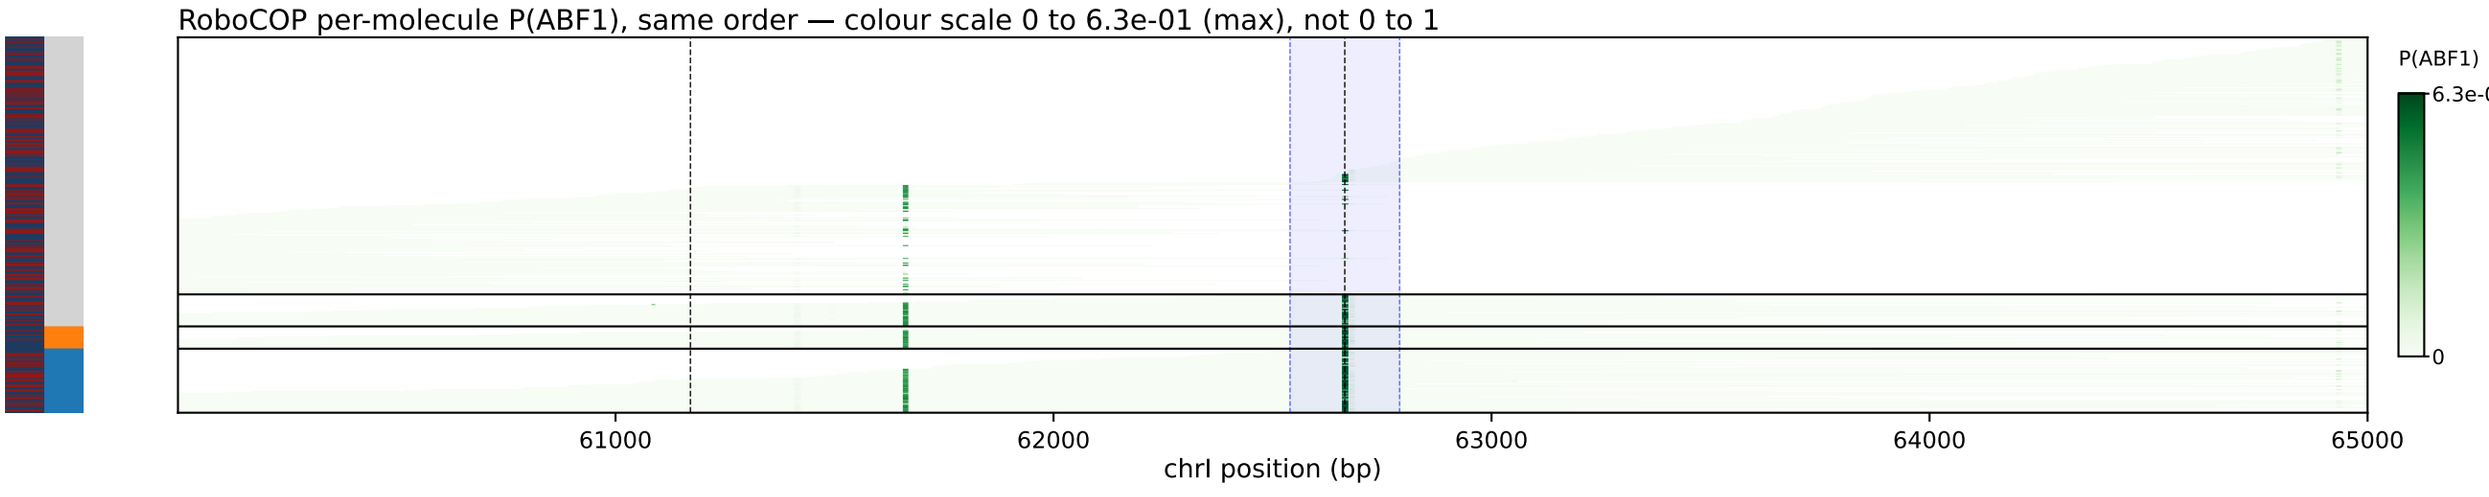

RoboCOP per-molecule P(accessible) = P(background), fibers clustered on the ABF1 window

RoboCOP per-molecule P(nucleosome), same clustered order

RoboCOP per-molecule P(ABF1), same order — colour scale 0 to 6.3e-01 (max), not 0 to 1

m6A
cluster 0 (n=66)
cluster 1 (n=23)
unclustered (n=33)
no clustering-window coverage (n=265)
Watson (+)
Crick (−)
MacIsaac ABF1 site
