x1500 chrI:60001-65000 387 molecules

ERV46

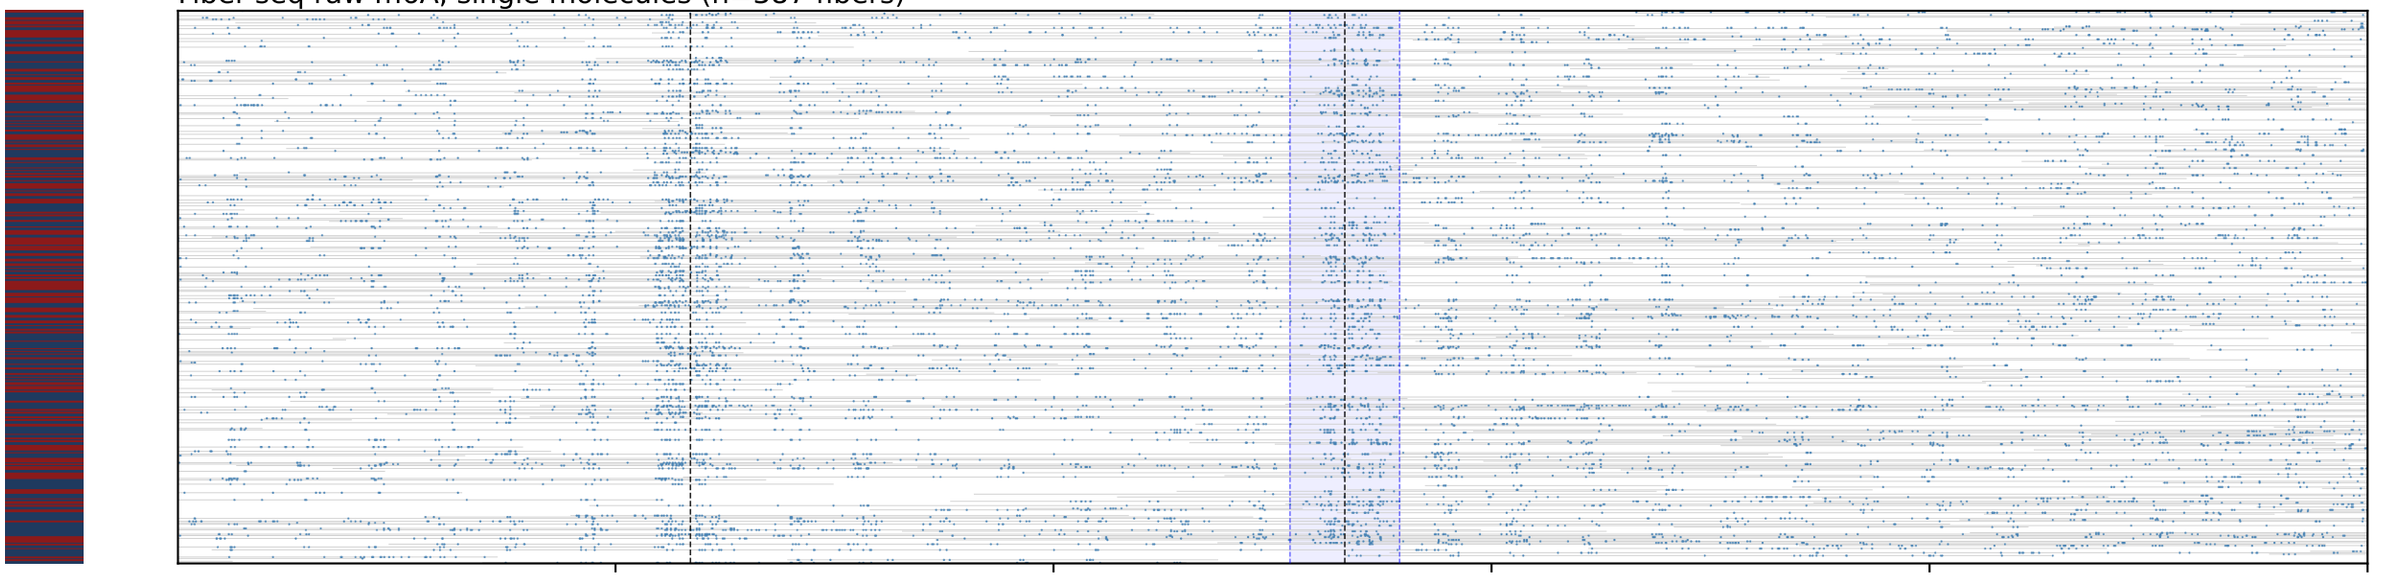

CDC24

PTA1

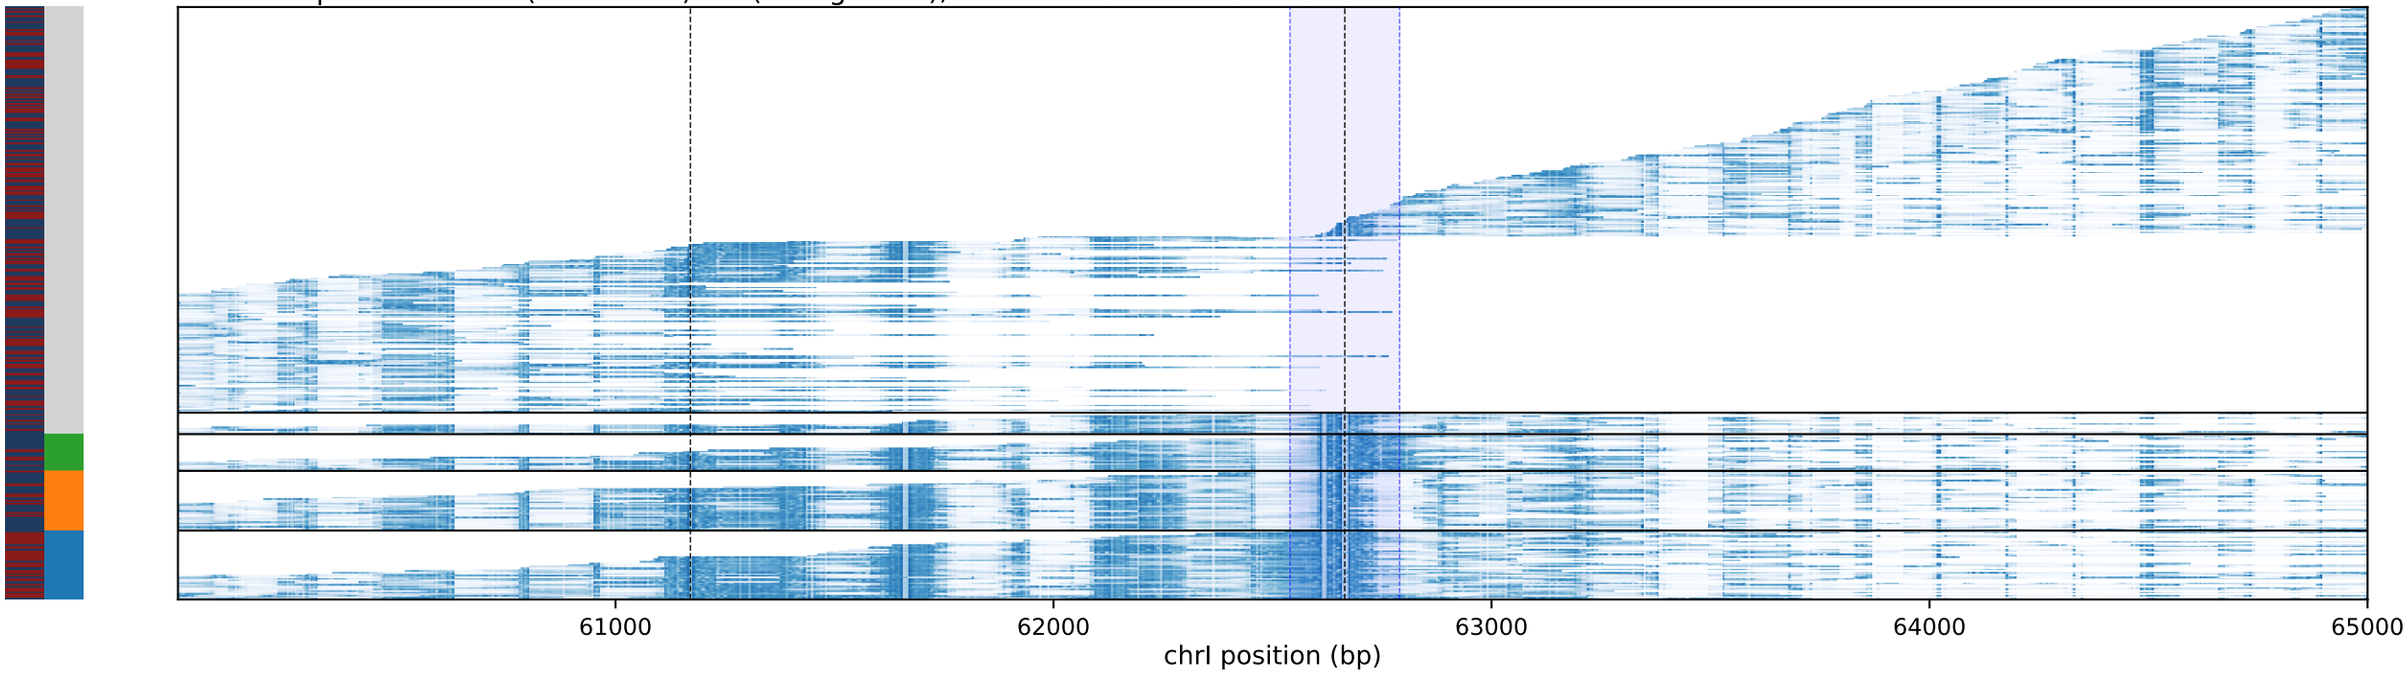

Mean P(accessible) over the 387 fibers (per-read decode; no pooled-pileup decode for this model)

Fiber-seq raw m6A, single molecules (n=387 fibers)

RoboCOP per-molecule P(accessible) = P(background), fibers clustered on the ABF1 window

m6A
cluster 0 (n=45)
cluster 1 (n=39)
cluster 2 (n=24)
unclustered (n=14)
no clustering-window coverage (n=265)
